Baby Boomers Buying More Online

The coronavirus pandemic has forced consumers to change many habits, including how they shop. This is particularly true for baby boomers (ages 56 to 74). Nearly half (45%) said they shop online more, with some product categories seeing a large shift in online purchases.

Percentage of baby boomers who purchase selected products primarily or entirely online

Year-End 2020 Tax Tips

Here are some things to consider as you weigh potential tax moves before the end of the year.

Defer income to next year

Consider opportunities to defer income to 2021, particularly if you think you may be in a lower tax bracket then. For example, you may be able to defer a year-end bonus or delay the collection of business debts, rents, and payments for services in order to postpone payment of tax on the income until next year.

Accelerate deductions

Look for opportunities to accelerate deductions into the current tax year. If you itemize deductions, making payments for deductible expenses such as medical expenses, qualifying interest, and state taxes before the end of the year (instead of paying them in early 2021) could make a difference on your 2020 return.

Make deductible charitable contributions

If you itemize deductions on your federal income tax return, you can generally deduct charitable contributions, but the deduction is limited to 60%, 30%, or 20% of your adjusted gross income (AGI), depending on the type of property that you give and the type of organization to which you contribute. (Excess amounts can be carried over for up to five years.) For 2020 charitable gifts, the normal rules have been enhanced: The limit is increased to 100% of AGI for direct cash gifts to public charities. And even if you don't itemize deductions, you can receive a \$300 charitable deduction for direct cash gifts to public charities (in addition to the standard deduction).

Bump up withholding

If it looks as though you're going to owe federal income tax for the year, consider increasing your withholding on Form W-4 for the remainder of the year to cover the shortfall. The biggest advantage in doing so is that withholding is considered as having been paid evenly throughout the year instead of when the dollars are actually taken from your paycheck.

Maximize retirement savings

Deductible contributions to a traditional IRA and pre-tax contributions to an employer-sponsored retirement plan such as a 401(k) can reduce your 2020 taxable income. If you haven't already contributed up to the maximum amount allowed, consider doing so. For 2020, you can contribute up to \$19,500 to a 401(k) plan (\$26,000 if you're age 50 or older) and up to \$6,000 to traditional and Roth* IRAs combined (\$7,000 if you're age 50 or older). The window to make 2020 contributions to an employer plan generally closes at the end of the year, while you have until April 15, 2021, to make 2020 IRA contributions. (*Roth contributions are not deductible, but Roth qualified distributions are not taxable.)

Avoid RMDs in 2020

Normally, once you reach age 70½ (age 72 if you reach age 70½ after 2019), you generally must start taking required minimum distributions (RMDs) from traditional IRAs and employer-sponsored retirement plans. Distributions are also generally required to beneficiaries after the death of the IRA owner or plan participant. However, recent legislation has waived RMDs from IRAs and most employer retirement plans for 2020 and you don't have to take such distributions. If you have already taken a distribution for 2020 that is not required, you may be able to roll it over to an eligible retirement plan.

Weigh year-end investment moves

Though you shouldn't let tax considerations drive your investment decisions, it's worth considering the tax implications of any year-end investment moves. For example, if you have realized net capital gains from selling securities at a profit, you might avoid being taxed on some or all of those gains by selling losing positions. Any losses above the amount of your gains can be used to offset up to \$3,000 of ordinary income (\$1,500 if your filing status is married filing separately) or carried forward to reduce your taxes in future years.

More to Consider

Here are some other things you may want to consider as part of your year-end tax review.

Consider postponing income and/or accelerating deductions if

You expect to be in a lower tax bracket next year (perhaps you'll retire next year)

Your itemized deductions are greater than the standard deduction this year

You want to delay payment of tax

Consider accelerating income and/or postponing deductions if

You expect to be in a higher tax bracket next year (perhaps you have reduced income this year)

The standard deduction is greater than your itemized deductions this year

You're subject to alternative minimum tax this year and certain deductions are disallowed

Printing Money: The Fed's Bond-Buying Program

The Federal Reserve's unprecedented efforts to support the U.S economy during the COVID-19 pandemic include a commitment by the Federal Open Market Committee (FOMC) to purchase Treasury securities and agency mortgage-backed securities "in the amounts needed to support smooth market functioning and effective transmission of monetary policy."¹

The Fed buys and sells Treasury securities as part of its regular operations and added mortgage-backed securities to its portfolio during the Great Recession, but the essentially unlimited commitment underscores the severity of the crisis. The Fed is also entering uncharted territory by purchasing corporate, state, and local government bonds and extending other loans to the private sector.

Increasing Liquidity

The Federal Open Market Committee sets interest rates and controls the money supply to support the Fed's dual mandate to promote maximum employment and stable prices, along with its underlying responsibility to promote the stability of the U.S. financial system. By purchasing Treasury securities, the FOMC increases the supply of money in the broader economy, while its purchases of mortgage-backed securities increase supply in the mortgage market. The key to increasing liquidity — called quantitative easing — is that the Fed can make these purchases with funds it creates out of air.

The FOMC purchases the securities through banks within the Federal Reserve System. Rather than using money it already holds on deposit, the Fed adds the appropriate amount to the bank's balance. This provides the bank with more money to lend to consumers, businesses, or the government (through purchasing more government securities). It also empowers the Treasury or mortgage agency to issue additional bonds knowing that the Fed is ready to buy them. The surge of bond buying by the Fed that began in March helped the Treasury to finance its massive stimulus program in response to the coronavirus.

By law, the Fed returns its net interest income to the Treasury, so the Treasury securities are essentially interest-free loans. The principal must be paid when the bond matures, and the bonds add to the national debt. But the Treasury issues new bonds as it pays off the old ones, thus shifting the ever-growing debt forward.

Protecting Against Inflation

Considering the seemingly endless need for government spending and private lending, you may wonder why the Fed doesn't just create an endless supply of money. The controlling factor is the potential for inflation if there is too much money in the economy.

Big Balance Sheet

The Federal Reserve's assets grew with quantitative easing during and after the Great Recession. In late 2018, the Fed began to reverse the process by allowing bonds to mature without replacing them, only to back off when markets reacted negatively to the move. The 2020 emergency measures quickly pushed the balance sheet over \$7 trillion.

Low interest rates and "money printing" led to high inflation after World War II and during the 1970s, but the current situation is different.² Inflation has been low for more than a decade, and the economic crisis has severely curtailed consumer spending, making inflation unlikely in the near term.

The longer-term potential for inflation remains, however, and the Fed does not want to increase the money supply more than necessary to meet the crisis. From a peak of \$75 billion in daily Treasury purchases during the second half of March, the FOMC began to gradually reduce the purchase pace in early April. By mid-June, it was down to an average of \$4 billion per day and scheduled to continue at that pace through mid-August, with further adjustments as necessary in response to economic conditions.³

U.S. Treasury securities are backed by the full faith and credit of the U.S. government as to the timely payment of principal and interest. The principal value of Treasury securities fluctuates with market conditions. If not held to maturity, they could be worth more or less than the original amount paid.

Lessons from the Lockdown: A Back-to-Basics Holiday

If there is one thing the COVID-19 stay-at-home orders demonstrated, it was the need to find joy in simple pleasures. In fact, 43% of respondents to one survey said they had "changed their ways for the better" as a result of the lockdown.¹ By applying some of the lessons learned from pandemic purgatory to the holiday season, families may be able to create new and meaningful traditions while saving money.

Travel. While confined to their homes for several months, people discovered the benefits of virtual get-togethers via video calls. The same survey cited above found that many people who used videoconferencing technology reported that they connected more with loved ones during the lockdown than before restrictions were put into place.² This holiday season, if you can't be with your loved ones, consider scheduling a virtual gathering to open gifts or share a meal together. An added benefit of less time and money spent on travel could be lower stress overall.

Experience vs. "stuff." Of course, sharing experiences in person can be more rewarding than a video chat. Stay-at-home orders prompted many people to reflect on how much they took for granted, especially the opportunity simply to spend time with loved ones they don't see on a regular basis. As many grandparents would likely contend, time spent with family can be a much more valuable gift than the latest gadget or fashion trend. Moreover, while in lockdown,

many families discovered they could actually live without many of the material goods they purchase on a regular basis. Rather than spending a lot on "stuff" this season, consider intentionally downsizing the piles of gifts exchanged and focusing more on the shared celebrations and traditions.

In April 2020, during the height of the stay-at-home orders, the nation's personal savings rate hit an all-time high of 32%.³

Food. During the lockdown, many people rediscovered the simple joy of preparing and eating home-cooked meals and baked goods. And because ingredients were often limited due to supply-chain disruptions, creativity became a valuable kitchen skill. This holiday season, instead of spending a small fortune dining out, why not put some of that pandemic culinary prowess to work? Simple meals that the whole family helps prepare can be cost-effective as well as memory-making. Wrapped up with a beautiful bow, your creations can also make thoughtful, inexpensive, edible gifts. (You might also consider supporting local businesses by having food gifts delivered or purchasing gift cards.)
